RWO Civil Structures Geoenvironmental

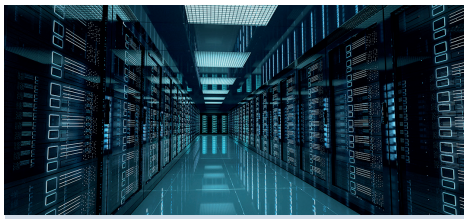
Data

RWO specialises in providing core value, civil, structural and geoenvironmental engineering services and solutions across the Data sector. We have the experience and technical capabilities to deliver your project from feasibility through initial design and development work to completion and final handover.

Deploying the latest engineering skills and processes together with advanced Building Information Modelling (BIM) technologies, our services include ground investigation and geophysical surveying, pre and master planning and development work and civil and structural engineering design.

New Build Data Campus, North London -
Provision of civil and structural engineering services for 55MW new build data campus project in North London.

Works included substructure and superstructure design through to construction, and civils 3D modelling work to ensure a fully coordinated utilities solution across the site.



Building Upgrade Works, Nationwide -
Structural and civil engineering services to support re-purposing of existing buildings for Data Centre usage in various locations.

Structural engineering support for building upgrades on central London Data Centre Campus.

New Build Data Centre, Cardiff -
Provision of civil, structural, and geoenvironmental services for 100MW Data Centre site in south Wales.

Providing support from pre-planning stage, supporting feasibility studies, major earthwork and remediation strategies, and continued support across all disciplines.
