RWO Civil Structures Geoenvironmental

Residential

RWO specialises in providing core value, civil, structural and geoenvironmental engineering services and solutions across all sectors - from residential and retail to commercial and industrial, we have the experience and technical capabilities to deliver your project from feasibility through initial design and development work to completion and final handover.

Deploying the latest engineering skills and processes together with advanced Building Information Modelling (BIM) technologies, our services include ground investigation and geophysical surveying, pre and master planning and development work and civil and structural engineering design.

Sunderland Civic Centre -
RWO is supporting a new multi-million-pound regeneration project in Sunderland.

We are providing civil, structural and geotechnical engineering services around the construction of hundreds of much needed new properties.

The current centre is being demolished to transform the brownfield site into a vibrant city community, which will eventually accommodate a mix of 265 new homes. The first properties are expected to be completed and ready to live in by autumn 2024.

Burniston -
RWO were appointed to provide civil and structural engineering services for the construction of over 50 new 2, 3 and 4 bed homes in Burniston near Scarborough.

These homes are perfectly suited to first-time buyers, downsizers, retirees and those who are simply wanting to escape the high cost of second-hand housing.

Yarm Back Lane -
RWO are supporting the development of one of the largest North East residential housing projects in years.

This latest work features planning consultancy, flood risk analysis, design expertise and local authority sewage adoption agreements as part of a six-figure package of engineering support at the 114-acre site, which is also set to include a hub for a community centre and shops as well as a new primary school.
